

# CYBERBIOSECURITY SUMMIT

The **Cyberbiosecurity Summit** is a two-day conference dedicated to exploring the intersection of cybersecurity and biotechnology, the frontier addressing vulnerabilities and threats facing our biological data, intellectual property, instruments and machinery, and the connected economic factors. Hosted by the **Bioeconomy Information Sharing and Analysis Center** (isac.bio) and the **Johns Hopkins University Applied Physics Laboratory** (jhuapl.edu), this event brings together thought leaders, innovators, and decision-makers to tackle the complex challenges posed by the convergence of cyber threats and the bioeconomy.

The rapid advancement of technology and science has transformed industries and revolutionized how we live our lives. These innovations also introduce increased vulnerabilities and risks.

The **Cyberbiosecurity Summit** aims to address these risks by fostering collaboration across disciplines and equipping professionals with the knowledge and tools needed to protect our most valued assets. The Summit welcomes industry leaders, researchers, entrepreneurs, investors, service providers, students, policymakers and other stakeholders who share an interest in this dynamic field. The event fosters cross-industry collaboration, ensuring that the cybersecurity challenges of tomorrow are met with comprehensive, forward-thinking solutions.

Attendees can expect a robust agenda featuring keynote addresses, panel discussions, technical workshops, and networking sessions. The Summit's content is curated to provide awareness, actionable insights, and research with the expectation that participants will leave with knowledge, tools, and community to help them navigate their role in this evolving threat landscape. A pre-session hosted by Google Cloud and Mandiant, creates the opportunity for participants to gain hands-on experience in identifying and mitigating cyber threats in the bioeconomy.

The **Cyberbiosecurity Summit** is more than a conference—it is a call to action for those committed to protecting the future of the bioeconomy. Join us in February 2025 to be part of this critical conversation and drive meaningful change.
